PROFESSIONAL OBJECTIVE

AI-focused Computer Science undergraduate with hands-on experience in **software development, data analytics, and AI/ML systems**. Proficient in **Python, Java, SQL, and Power BI**, with a proven ability to build REST APIs, design data pipelines, develop predictive models, and deliver actionable insights through dashboards. Seeking to apply strong **analytical thinking, engineering fundamentals, and a problem-solving mindset** to contribute meaningfully in a data-driven, technology-forward organisation.

EDUCATION

• Sri Vasavi Engineering College B.Tech – Computer Science Engineering (Artificial Intelligence)	2022 – 2026 CGPA: 8.11 / 10
• Sasi Junior College Intermediate – MPC	2020 – 2022 92%
• Sasi English Medium School SSC	2019 – 2020 GPA: 9.7

SKILLS

- **Programming:** Python, Java, C
- **AI & ML:** Scikit-learn, LangChain, FAISS, Predictive Modelling, Multi-Agent Systems, NLP (basic)
- **Data & Analytics:** SQL, Advanced Excel, Power BI, Tableau, DAX (basic), Power Query, Pandas, NumPy
- **Backend Development:** Flask, REST APIs, Authentication, CRUD Operations
- **Web Technologies:** HTML, CSS, JavaScript
- **Databases:** MySQL, SQL Server, Firebase, Supabase (PostgreSQL)
- **Tools & Platforms:** Git, GitHub, VS Code, Streamlit
- **Concepts:** Data Structures & Algorithms, OOP, SDLC, ETL Pipelines, KPI Development, API Integration, Debugging
- **Soft Skills:** Stakeholder Communication, Cross-functional Collaboration, Ownership, Problem Solving

PROJECTS

AI Exam Research Assistant – Multi-Agent LLM System [\[GitHub\]](#) 2026

- Architected a **multi-agent AI system** using Python and LangChain to autonomously search, scrape, process, and structure data from multiple sources – reducing manual research effort end-to-end.
- Built modular **ETL pipelines** with validation at each stage – search, scraping, transformation, and structured JSON output – ensuring data quality and consistency across pipeline runs.
- Integrated **FAISS vector database** for high-accuracy semantic retrieval, enabling context-aware responses from large unstructured document sets.
- Deployed an interactive **Streamlit interface** for visualisation and study planning, making complex AI outputs accessible to non-technical users.

Customer Churn Analysis – Predictive Dashboard [\[GitHub\]](#) 2025

- Processed and analyzed **7,000+ customer records** using Python and SQL to uncover churn patterns, behavioral trends, and key risk drivers across customer segments.
- Built and evaluated **classification models** (Logistic Regression, Random Forest) using Scikit-learn, benchmarking performance across accuracy, precision, recall, and AUC metrics.
- Developed interactive **Power BI dashboards** with DAX-driven KPIs – churn rate, retention rate, and customer segmentation – to support data-driven business decisions.
- Automated data preparation workflows using reusable Python scripts, eliminating manual steps and improving end-to-end reporting efficiency.

Social Blog Platform – Full Stack Backend System [\[GitHub\]](#) 2025

- Designed and built **RESTful APIs** using Flask for user authentication (JWT), post management, and full CRUD operations – handling structured data flow across application layers.
- Integrated **MySQL database** with optimised query design, ensuring data integrity and reliable performance under concurrent user interactions.
- Connected frontend (HTML/CSS/JS) with backend services, performed systematic **debugging and testing** to resolve bottlenecks and improve response reliability.
- Maintained clean, modular codebase with **Git version control** – organising logic into reusable components and following systematic development practices throughout.

EXPERIENCE

Full Stack Developer Intern – Ceeras IT Services

Feb 2025 – Jun 2025

- Developed and optimised **backend modules and REST APIs** in Java, handling structured data workflows and improving system efficiency and reliability.
- Ensured **data consistency and integrity** across application layers by implementing robust data processing and validation logic.
- Followed **systematic coding practices** – modular structure, meaningful comments, edge case handling – producing maintainable, production-ready code.
- Collaborated with developers using **Git version control**, debugging issues and improving execution speed of backend processes.

Deloitte Australia – Data Analytics Job Simulation (Forage)

Feb 2026

- Analyzed structured business datasets using **Excel and Python** to identify trends, anomalies, and performance insights aligned with real-world analytics workflows.
- Built **Tableau dashboards** to visualise KPIs and business metrics; prepared structured reports and findings for simulated stakeholder and leadership reviews.

| • Sri Vasavi Engineering College
B.Tech – Computer Science Engineering (Artificial Intelligence) | 2022 – 2026
CGPA: 8.11 / 10 |
| • Sasi Junior College
Intermediate – MPC | 2020 – 2022
92% |
| • Sasi English Medium School
SSC | 2019 – 2020
GPA: 9.7 |

CERTIFICATIONS

- Microsoft Azure AI Fundamentals (AI-900)
- Oracle OCI Foundations Associate
- Oracle OCI Generative AI Certified
- NPTEL – Data Structures & Algorithms using Java
- Deloitte Australia Data Analytics Job Simulation (Forage)

ACHIEVEMENTS

- **Qualified GATE 2026 – Data Science & Artificial Intelligence (DA)** – demonstrates advanced proficiency in statistics, machine learning, and data science fundamentals at a national level.
- **Solved 500+ Data Structures & Algorithms problems on GeeksforGeeks** – strong algorithmic and problem-solving foundation.
- Shortlisted for **Smart India Hackathon 2024 (Level 2)** – recognised for innovative, data-driven problem solving at a national level.
